### Ten geleide

Bij de uitgave door het KNMI van een Technisch Rapport van de hand van een weergeïnteresseerde buiten het instituut is een toelichting op zijn plaats. Het gaat hier om een rapport van een lid van de Werkgroep Weeramateurs van de Nederlandse Vereniging voor Weer- en Sterrenkunde. Reeds spoedig na de oprichting van deze werkgroep in 1970 bleek er bij de leden grote belangstelling te bestaan voor gecoördineerde samenwerking met het KNMI. Het hieruit voortkomend overleg resulteerde in 1975 tot het opstellen van een aantal projecten, waarin het KNMI geïnteresseerd was en waarvoor de werkgroep de mankracht zou kunnen leveren voor de uitvoering. In 1978 werd een eerste project afgesloten, "De betrouwbaarheid van de weersverwachting, speciaal voor de grensgebieden van Nederland". Het rapport dat in 1980 in druk verscheen is later veel gebruikt en geciteerd.

Er lagen (en liggen) echter meer terreinen braak waarvoor het KNMI de mankracht ontbrak. Was de verificatie van de weersverwachting een project waarbij vele tientallen weeramateurs actief waren betrokken, bij de nieuwe onderzoeken lag het accent meer op individuele activiteiten. De auteur van dit rapport heeft er jarenlang aan gewerkt, zowel thuis als op het archief van het KNMI, en daarbij niet op een uurtje gekeken. Het resultaat is een reeks systematisch bijeengebrachte, gecontroleerde en gerubriceerde gegevens, die tot nu toe vrijwel ontoegankelijk waren. Er was in Nederland tot dit moment geen informatie over het sneeuwklimaat beschikbaar, terwijl daar toch regelmatig vragen over werden gesteld. Veel gevraagd werd het aantal dagen met een sneeuwdek voor verschillende plaatsen in Nederland, de langste en de gemiddelde duur van een sneeuwbedekking, de gemiddelde en de maximale dikte van een sneeuwdek. Dit rapport voorziet ongetwijfeld in een behoefte. Het kon tot stand komen dankzij het doorzettingsvermogen van de auteur.

Drs. B. Zwart  
coördinator KNMI-Werkgroep Weeramateurs

### Voorwoord

Het technisch rapport "Sneeuwdekhoogten in Nederland 1956-1977" ontstond uit een persoonlijk verlangen een inzicht te krijgen in systematische verschillen bij de sneeuwbedekking van Nederland. Bij navraag op het KNMI bleek dat er geen publikaties waren van meetreeksen over landelijke sneeuwbedekking. Het KNMI had de sneeuwhoogte echter wel gepubliceerd op het codeblad van het "Dagelijks Weerbericht" over de periode 1956-1970. De hoogte van het sneeuwdek werd hierop in codevorm aangegeven waarbij elk codecijfer overeenkwam met een bepaald traject.

Wat als een privé-onderzoek begon, kreeg in de loop der jaren de belangstelling en de begeleiding van het KNMI. Ten slotte bleek hier de behoefte aan gegevens zó dringend dat het onderzoek bij het jaar 1977 werd afgesloten om het instituut de gelegenheid te geven met de bewerking van de getallenreeksen te beginnen. De reeks omvat nu twintig jaar, namelijk de periode 1956-1976. Op deze plaats wil ik de heren B. Zwart (Centrale Weerdienst) en R.A. Wijsman (Centrale Registratie en Archief van Waarnemingsgegevens) bedanken voor hun begeleiding en wegwijz in het uitgebreide KNMI archief.

Jan van der Horst.

### Summary

In this report "Synoptical observations of snow depths at Dutch meteorological stations" a set of snow depths observations is given for the period 1956 - 1977. The observations were made at 09.00 hr U.T. More than 130 tables indicate for the winter half year (November-April) the snow depths for 18 stations. If necessary May and October are included.

In the first column you will find the dates, the other columns give the snow depths for each station, indicated by a code number (for explanation see page 7). For explanation of the code numbers for snow depths see page 8. When there lies no snow, it is represented by a dot (.); missing data are represented by X.

Missing and unlikely data are given as estimations in the right hand parts of the tables. Most of these estimations have been obtained by geographical interpolation. Sometimes, however, careful examination of weather reports of the concerned or nearby stations at different hours proved to give more realistic estimations (see page 8-10).

For a good understanding, one should bear in mind that snow depths are given without considering the question whether there was a complete, more than a half or less than a half snow cover.

SNEEUWDEKHOOGTEN IN NEDERLAND  
1956-1977

Beschikbare bronnen voor sneeuwdekhoogten

Er bestaan drie gegevensbestanden over sneeuwdekhoogten:

1. de gegevens van de synoptische stations
2. de gegevens van de termijnstations
3. de gegevens van de regenstations

Bij een aantal termijnstations staat bij de gegevens ook een code voor sneeuwdekhoogten. De waarnemingen omvatten de periode 1953-1967. Deze gegevens zijn in kaartvorm verwerkt in de klimaatatlas van Nederland (1972).

De regenstations leveren naast de waarnemingen van de neerslaghoeveelheden ook waarnemingen van het sneeuwdek in een speciale code. Deze gegevens zijn aanwezig over een volle klimatologische periode (1951-1980) en staan vanaf 1 januari 1978 op magneetband. Zij omvatten eenmaal daagse metingen om 08.00 uur U.T.

De gegevens van de synoptische stations zijn over de periode 1956-1970 gepubliceerd op het codeblad van het dagelijks weerbericht. Daarna komen ze voor in de waarnemingsboeken van de synoptische stations.

Voor de samenstelling van de tabellen in dit verslag is uitsluitend gebruik gemaakt van de gegevens van de synoptische stations.

Werkwijze bij het samenstellen van de tabellen en het aanbrengen van correcties.

Totaal 19 synoptische stations verrichtten in de priode 1956-1977 dagelijks een sneeuwdekhoogtewaarneming om 9<sup>h</sup>00<sup>u</sup> U.T., de meeste stations gedurende het volledige tijdvak. Gedurende een deel van deze periode werden deze waarnemingen verricht te Rotterdam, Woensdrecht, Zierikzee, Schiphol en De Peel. Van het laatste station komen de waarnemingen slechts gedurende enkele maanden in de synopcode voor.

Stationscode

|                 |                 |
|-----------------|-----------------|
| 200 Ypenburg    | 290 Twente      |
| 210 Valkenburg  | 310 Vlissingen  |
| 230 Den Helder  | 325 Zierikzee   |
| 235 De Kooy     | 340 Woensdrecht |
| 240 Schiphol    | 344 Rotterdam   |
| 260 De Bilt     | 350 Gilze-Rijen |
| 265 Soesterberg | 370 Eindhoven   |
| 270 Leeuwarden  | 375 Volkel      |
| 275 Deelen      | 380 Beek (Z-L)  |
| 280 Eelde       | 385 De Peel     |

De tabellen bestaan uit een deel met oorspronkelijke gegevens (links) en een deel met gecorrigeerde codecijfers (rechts).  
De correcties omvatten zowel de schattingen voor de ontbrekende waarnemingen als verbeterde ramingen voor onbetrouwbare metingen.

Sneeuwdekhoogtecode (in de tabellen gebruikt)

|    |             |                    |
|----|-------------|--------------------|
| .  | geen sneeuw |                    |
| 1: | < 2 cm      | 6: 25 - 49 cm      |
| 2: | 2 - 4 cm    | 7: 50 - 99 cm      |
| 3: | 5 - 9 cm    | 8: 100 - 199 cm    |
| 4: | 10 - 14 cm  | 9: 199 cm          |
| 5: | 15 - 24 cm  | x: geen waarneming |

Ruimtelijke interpolatie

Voor een schatting van ontbrekende of verbetering van "verdachte" waarden in de oorspronkelijke codetabellen is gebruik gemaakt van een ruimtelijke interpolatie:

Er is een zo nauwkeurig mogelijke analyse gemaakt van de grenzen tussen de codecijfers met behulp van de bekende stations. Het ontbrekende station krijgt dan het codegetal van het codegebied waarin het is komen te liggen.

Ter illustratie van de gevolgde methode is een aantal kaartjes opgenomen waarop de geïnterpoleerde waarden zijn onderstreept. Op de kaartjes is een ontbrekend sneeuwdek aangegeven met 0 in plaats van met een (.)

Correcties in afwijking van de ruimtelijke interpolatie

De ruimtelijke interpolatiemethode kon in verreweg de meeste gevallen worden toegepast. Een aantal vormde hierop echter een uitzondering. Deze zijn hierna apart vermeld.

| <u>Datum</u> | <u>Station</u> | <u>Aard der correctie</u>  |
|--------------|----------------|--|
| 21-2-1956    | 380            | Interpolatie levert het codecijfer 5 op. Er viel in Beek in het afgelopen etmaal geen neerslag, zodat codecijfer 4 kon worden gehandhaafd. |
| 21-1-1958    | 210            | Interpolatie is niet nodig. De laatste twee cijfers van de "2-groep" zijn verwisseld.  |

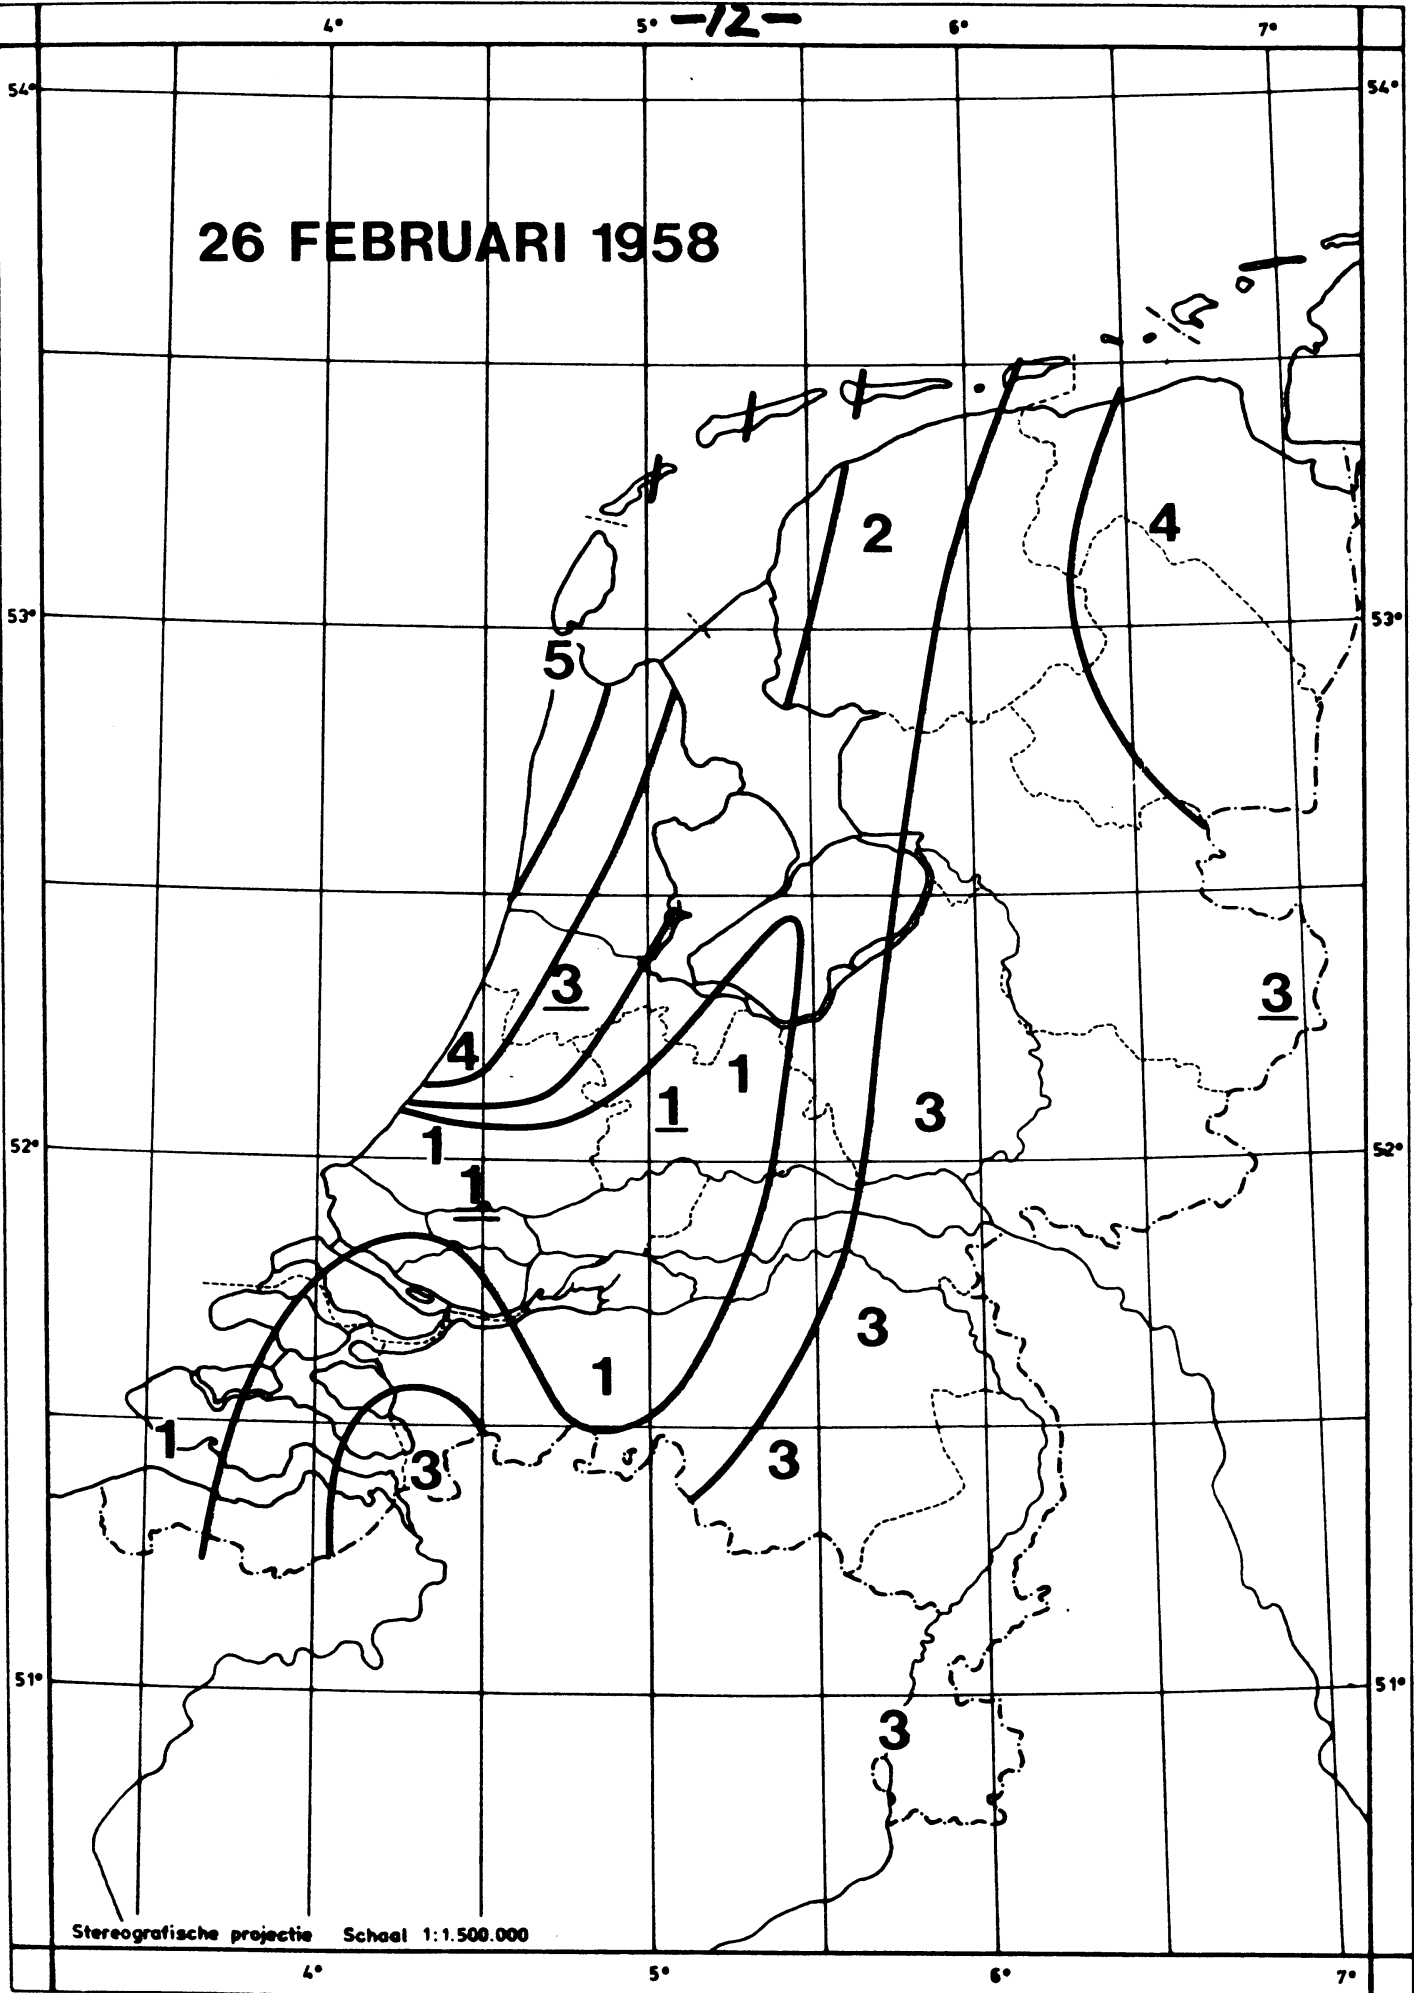

| <u>Datum</u>            | <u>Station</u> | <u>Aard der correctie</u>   |
|-------------------------|----------------|---|
| 28-1-1958               | 275            | Ruimtelijke interpolatie levert codecijfer 1 op. Waarschijnlijker lijkt codecijfer 3 gezien de overgang van 4 naar 2 tijdens dooi.  |
| 15/17-1-1-1959          | 240            | Ruimtelijke interpolatie zou codecijfer 2 hebben opgeleverd (Valkenburg-De Bilt). Wegens de geringe dikte van het sneeuwdek in Noord- en Zuid-Holland is codecijfer 1 waarschijnlijker.                             |
| 2-2-1962                | 200            | Interpolatie is niet nodig. Zie 21-1-1958.  |
| 16-3-1962               | 340            | Interpolatie is niet nodig. Zie 21-1-1958.  |
| 26-12-1962              | 260            | Interpolatie is niet nodig. Zie 21-1-1958.  |
| 5-1-1963                | 325            | In de periode van 4 tot 6 januari viel er buiten de noordelijke provincies geen sneeuw, terwijl Zierikzee op 6 januari codecijfer 3 meldt. Daarom is het door interpolatie verkregen codecijfer 2 vervangen door 3. |
| 7-1-1963                | 240            | Voor de toestand van de grond wordt codecijfer 7 gegeven (omgeving geheel met sneeuw bedekt). Het oorspronkelijke codecijfer gaf "geen sneeuw" aan. Dit is via interpolatie vervangen door 2.                       |
| 31-1-1963)<br>2-2-1963) | 275            | Ruimtelijke interpolatie zou voor dit station een te hoog codecijfer hebben opgeleverd. Op 30 januari en op 3 februari meldt Deelen codecijfer 1. Vermoedelijk is veel sneeuw weggestoven van het meetterrein.      |
| 26/28-2-1963            | 210            | Ondanks droog weer en felle zon wordt van 1 tot 4 maart nog codecijfer 3 gemeld. Daarom is in afwijking van de interpolatie ook voor de laatste dagen van februari codecijfer 3 aangehouden.                        |
| 2-3-1963                | 325            | Op 3 maart wordt nog codecijfer 3 gemeld. Het door interpolatie verkregen codecijfer 2 is daarom vervangen door 3.  |
| 9-2-1966                | 280            | Wegens de uitzonderlijke situaties in het noorden van het land is aan een interpolatie in de <u>tijd</u> de voorkeur gegeven: codecijfer 5 verkregen uit hetzelfde cijfer op 8 en 10 februari.                      |
| 16-2-1966               | 290            | Het oorspronkelijk codecijfer voor die dag is 5, maar in het voorgaande etmaal is geen sneeuw gevallen en stond er ook  |

|                   |         |   |
|-------------------|---------|---|
|                   |         | weinig wind (dus geen stuifsnieuw). Een omgang van codecijfer 3 naar 5 is zeer onwaarschijnlijk. Codecijfer 3 is aangehouden.   |
| 29-3-1966         | 265     | Interpolatie is niet nodig. Zie 21-1-1958.  |
| 13-12-1967        | 290     | De weerrapporten van het voorafgaande etmaal (motregen, ijzel, mist) geven geen aanleiding de geïnterpoleerde waarde (2) te kiezen. Het codecijfer 1 van de vorige dag is waarschijnlijk.   |
| 6/7-1-1968        | 265     | Interpolatie is niet nodig. Zie 21-1-1958.  |
| 15/16-2-1969      | 200/344 | Codecijfer 4 voor Rotterdam op 15 en 16 februari is waarschijnlijk te hoog. Er viel in de 48 uur na 14 februari daar geen sneeuw. Daardoor komt het door interpolatie verkregen codecijfer 4 voor Ypenburg ook te hoog uit. Op 17 februari meldt Rotterdam evenals op 14 februari codecijfer 3. Daarna is gekozen voor codecijfer 3 voor zowel Rotterdam als Ypenburg op 15 en 16 februari. |
| 18-2-1970         | 344     | Voor de toestand van de grond wordt codecijfer 7 gegeven (geheel met sneeuw bedekt). Desondanks wordt in de sneeuwdekcode "geen sneeuw" gemeld. Interpolatie levert een 4 op, maar in feite is de dikte nog groter, n.l. gelijk aan het codecijfer op 17 en 19 februari (5).  |
| 10-3-1970         | 290     | Interpolatie niet nodig. Zie 21-1-1958.   |
| 31-1/<br>1-2-1976 | 200     | Interpolatie zou "geen sneeuw" opleveren, maar op 2 februari meldt Ypenburg codecijfer 1. Op 1 februari is er geen sneeuw gevallen. Voor genoemde twee dagen is daarom codecijfer 1 aangehouden.  |
